Hey team!

I am contacting you to apply for your open front end software engineer role at Handshake. As a software engineer, I enjoy the collaborative process of programming and I am passionate about building responsive, seamless, rich applications such as Handshake's. I am especially thrilled for the opportunity to be a part of a platform that is improving the security and reliability of the internet, and I feel my prior experience makes me a great fit for the role.

I have a strong foundation in JavaScript and modern MVC frameworks such as React and Angular. Recently I developed a web application called Obie, which is a service for tenants and landlords to manage maintenance requests and household finances in a web + mobile platform. I used React and React-Native on the front end to modularize the front-end views, maintain a DRY codebase, and significantly decrease render times of page updates. On the back-end, I built an asynchronous server, architected RESTful APIs by utilizing technologies such as Node and Express, utilized MySQL database to organize relational data. Lastly, by integrating the Venmo API to communicate with the front-end architecture, I allowed users to easily make quick and safe transactions.

I believe my ability in building highly interactive web applications and my interest in Handshake's ability to build a robust platform for future for college students and young alumni, makes me an excellent candidate for the front-end software engineer position. I can best be reached at 415-535-9712 or by email at lylynguyen812@gmail.com. Thank you very much for considering me and I look forward to hearing from you soon.

Sincerely,

Lyly Nguyen
